

ChargeUP® Overview

Delivering

Reliability & ROI in EV Charging

At NovaCHARGE, we believe in creating successful ROI for all station (charger) owners. With 15+ years of experience in deploying EV charging hardware and software for marquee brands, we know how to build a seamless charging experience for EV drivers while creating proven value for station owners. Key to this is the ability for the station owner or host (manager) to easily oversee and manage charger deployment. The industry leading ChargeUP® charging platform management system (CPMS) is the answer to that challenge, providing all the necessary tools to monitor and manage your charger deployment.

ChargeUP® provides owners and hosts with a concise dashboard to quickly understand the status of deployed chargers, manage pricing, power, and scheduling rules, and view historical reports of power dispensed, revenue earned, and more. Station owners and hosts can identify immediately which chargers are in use, as well as any chargers experiencing problems. Having an in-depth understanding of your EV charging business is crucial to delivering a seamless user experience, and ChargeUP's intuitive interface enables that understanding quickly and easily.

Experience these ChargeUP features and more...

MULTIPLE FEE MODELS

- ✓ Ability to create usage rules that enable differentiation in EV charger access
- ✓ Ability to apply usage & pricing rules for accounts, drivers, vehicles, & organizations
- ✓ Host-defined flexible pricing rules designed to support a variety of business models
- ✓ Support for public charging, including kWh pricing, parking pricing & independent tax and fee structures
- ✓ Ability to designate transaction fees as driver-paid or administrator-paid fees

FLEXIBLE HOST & STATION ROLES

- ✓ Integrated & distributed management models
- ✓ Enables a variety of “host” organizations to manage specific business models
- ✓ Provides for separate organizational permissions & access rights for hosts
- ✓ Host-level pricing & usage rules defined for specific locations
- ✓ Independent user logins & reporting for hosts vs station manager

FULL OCPP MANAGEMENT

- ✓ ADR 2.0 & OCPI Compliant
- ✓ Web-enabled, platform independent, virtual & secure user access
- ✓ Roles-based system allows diversity of assignments for administrative users
- ✓ Mobile app makes it easy for drivers to communicate, while key fobs embedded with RFID are an additional option for users to quickly charge

ROBUST REPORTING

- ✓ Extensible report template creation enables custom reports
- ✓ Allows for charger and organizational usage and session reporting
- ✓ Ability to save and share report templates among administrative users
